Question ID : 5861804199

Comprehension:

Read the passage and answer the following questions:

It's the poster characteristic of the teenager years: adolescent rebellion. And it's one that causes many conflicts with parents.

Two common types of rebellion are against fitting in socially (rebellion of non-conformity) and against adult authority (rebellion of non-compliance). In both types, rebellion attracts adult attention by offending it.

The young person proudly asserts individuality from what parents like or independence of what parents want and in each case succeeds in provoking their disapproval. This is why rebellion, which is simply behavior that deliberately opposes the ruling norms or powers that be, has been given a good name by adolescents and a bad one by adults.

The reason why parents usually dislike adolescent rebellion is not only that it creates more resistance to their job of providing structure, guidance, and supervision, but because rebellion can lead to serious kinds of harm. Rebellion can cause young people to rebel against their own self-interests — rejecting childhood interests, activities, and relationships that often support self-esteem. It can cause them to engage in self-defeating and self-destructive behavior — refusing to do school work or even physically hurting themselves.

It can cause them to experiment with high-risk excitement — accepting dares that as children they would have refused. It can cause them to reject safe rules and restraints — letting impulse overrule judgment to dangerous effect and it can cause them to injure valued relationships — pushing against those they care about and pushing them away.

So adolescent rebellion is not simply a matter of parental aggravation; it is also a matter of concern. Although the young person thinks rebellion is an act of independence, it actually never is. It is really an act of dependency. Rebellion causes the young person to suspend self-definition and do the opposite of what other people want.

That's why the antidote for rebellion is the true independence offered by creating and accepting a challenge — the young person deciding to do something hard with themselves for themselves in order to grow themselves. The teenager who finds a lot of challenges to engage with, and who has parents who support those challenges, doesn't need a lot of rebellion to transform or redefine him or herself in adolescence.

Serious rebellion typically begins at the outset of adolescence, and when it does many parents think this opposition is against them. They are usually mistaken. Rebellion is not against them; it is only acted out against them.

Rebellion at the beginning of teens is primarily a process through which the young person rejects the old child identity that he or she now wants to shed to clear the way for more grown up redefinition ahead. Rebellion at this early adolescent age proclaims: "I refuse to be defined and treated as a child any more!" Now he knows how he doesn't want to be, but he has yet to discover and establish how he does want to be.

How should parents respond to strong rebellion at this stage? When requests are met with delay, use patient insistence to wear down resistance. And try to move the early adolescent from acting out to talking out. Begin by asking, "can you help me better understand what you need?" See if you can get the young person to put their feelings into words. Having been given a full hearing and having had his or her say, the young person may now be more inclined to let parents have their way.

Question ID : 5861804209

Comprehension:

Read the passage and answer the following questions:

Consider yourself lucky whenever you pour yourself a glass of water. Today, on every continent in the world, there are people who, because of water scarcity, spend their entire day looking for clean water.

According to reports the United Nations created as part of the Water for Life initiative and the non-profit water.org, one in ten people do not have access to clean water. Worldwide, that is roughly 783 million people. Imagine 783 million people who struggle daily for the clean drink of water that luckier people wake up to.

There are two kinds of water scarcity. The first is physical water scarcity, which occurs in areas without natural water resources, such as deserts like the Sahara. The second is economic water scarcity, which occurs in areas where there are enough water resources for people to use, but they are poorly managed and allowed to be contaminated. Physical water scarcity is most often caused by drought. Droughts can be declared after as little as 15 days without rainfall and can continue indefinitely. The longest drought in recorded history lasted for 400 years in the Atacama Desert in Chile.

Droughts are a natural process that have occurred throughout history. The effects of prolonged drought often depend on both severity and how people react to them. Sometimes, like in California, drought can simply lead to a change of what is easily available for purchase in grocery stores. Others, like the 1900 drought in India, which had a death toll between 250,000 and 3.25 million, can lead to mass migration, famine, and humanitarian crisis.

Droughts can start unexpectedly and last indefinitely. This unpredictability is a major factor in what turns droughts from unpleasant to deadly. Climate scientists are currently predicting that the same human activities which will lead to global climate change will trigger more droughts. The droughts triggered will be less natural and therefore even more unpredictable.

Economic water scarcity, on the other hand, is the result of plentiful water resources being mismanaged and leading to contamination and disease, sometimes as a result of war or conflict. In addition, water overuse and pollution are increasing global water insecurity. Contamination occurs whenever something is mixed into a water supply; if it is harmful to humans, animals, or plants, it is then referred to as pollution. Pollution can be as simple as a dead animal dumped into the river that supplies a village, or as complex as large multinational corporations building factories that pollute water sources. Worldwide, water is not always contaminated as a result of corporate pollution. In Mexico City, after the 1985 earthquake damaged the pipes and tunnels the city had built for water, the government could not manage to repair the damage. Now, over 30 years later, the city still does not have access to clean drinking water. When a region is embroiled in a conflict or war, it becomes much more difficult for the people in that region to access water.

Water is life. That's not an exaggeration or a metaphor. Large swaths of people die from waterborne diseases, or from dehydration, as a direct consequence of water scarcity. A human body is largely made of water, and daily water intake is absolutely necessary to replenish that. Water is more important for survival than food, and global access to water is a fundamental human issue.

SubQuestion No : 16

Q.16 The effects of long lasting droughts depend upon:

Ans

- ☐ 1. Climate conditions of the particular region.
- ☐ 2. How water is managed in that region.
- ☐ 3. How polluted the water in that region is.

The second is economic water scarcity, which occurs in areas where there are enough water resources for people to use, but they are poorly managed and allowed to be contaminated. Physical water scarcity is most often caused by drought. Droughts can be declared after as little as 15 days without rainfall and can continue indefinitely. The longest drought in recorded history lasted for 400 years in the Atacama Desert in Chile.

Droughts are a natural process that have occurred throughout history. The effects of prolonged drought often depend on both severity and how people react to them. Sometimes, like in California, drought can simply lead to a change of what is easily available for purchase in grocery stores. Others, like the 1900 drought in India, which had a death toll between 250,000 and 3.25 million, can lead to mass migration, famine, and humanitarian crisis.

Droughts can start unexpectedly and last indefinitely. This unpredictability is a major factor in what turns droughts from unpleasant to deadly. Climate scientists are currently predicting that the same human activities which will lead to global climate change will trigger more droughts. The droughts triggered will be less natural and therefore even more unpredictable.

Economic water scarcity, on the other hand, is the result of plentiful water resources being mismanaged and leading to contamination and disease, sometimes as a result of war or conflict. In addition, water overuse and pollution are increasing global water insecurity. Contamination occurs whenever something is mixed into a water supply; if it is harmful to humans, animals, or plants, it is then referred to as pollution. Pollution can be as simple as a dead animal dumped into the river that supplies a village, or as complex as large multinational corporations building factories that pollute water sources. Worldwide, water is not always contaminated as a result of corporate pollution. In Mexico City, after the 1985 earthquake damaged the pipes and tunnels the city had built for water, the government could not manage to repair the damage. Now, over 30 years later, the city still does not have access to clean drinking water. When a region is embroiled in a conflict or war, it becomes much more difficult for the people in that region to access water.

Water is life. That's not an exaggeration or a metaphor. Large swaths of people die from waterborne diseases, or from dehydration, as a direct consequence of water scarcity. A human body is largely made of water, and daily water intake is absolutely necessary to replenish that. Water is more important for survival than food, and global access to water is a fundamental human issue.

Q.18 The passage is mainly about:

- Ans
- ☒ 1. droughts
 - ☒ 2. effects of water borne diseases
 - ☒ 3. worldwide water scarcity
 - ☒ 4. effects of droughts

Question ID : 5861804212

Comprehension:

Read the passage and answer the following questions:

Consider yourself lucky whenever you pour yourself a glass of water. Today, on every continent in the world, there are people who, because of water scarcity, spend their entire day looking for clean water.

According to reports the United Nations created as part of the Water for Life initiative and the non-profit water.org, one in ten people do not have access to clean water. Worldwide, that is roughly 783 million people. Imagine 783 million people who struggle daily for the clean drink of water that luckier people wake up to.

There are two kinds of water scarcity. The first is physical water scarcity, which occurs in areas without natural water resources, such as deserts like the Sahara. The second is economic water scarcity, which occurs in areas where there are enough water resources for people to use, but they are poorly managed and allowed to be contaminated. Physical water scarcity is most often caused by drought. Droughts can be declared after as little as 15 days without rainfall and can continue indefinitely. मध्ययुगीन भक्त कवियों में मीरा और सूर ने जिस आदर्श समाज की कल्पना की वह आज भी वरेण्य है। सूर के यहाँ स्त्रियों अपने संपूर्ण स्त्रीत्व भाव में आती हैं। वे न तो देवी हैं और न ही शोषित। नंद को सलाह देती यशोदा तो आदर्श पत्नी हैं ही, कृष्ण की पालित माता भी वही हैं। उनके वात्सल्य के समक्ष वास्तविक माता का वात्सल्य उपेक्षणीय है। सूर की गोपियाँ ज्ञान और प्रेम में प्रेम को अधिक महत्व देती हैं और ज्ञान की उपेक्षा करती हैं। क्या ऐसा आदर्श समाज जो स्त्रियों को उनका स्त्रीत्व प्रदान करे आज तक बन पाया, नहीं। भक्त कवि आज की इस चिंता को उस समय देख रहे थे। इसलिए भक्तिकाल और भी प्रासंगिक हो जाता है। स्त्री की स्वतन्त्रता और समानता जैसे मानवीय मूल्य के लिए मीरा आजीवन लड़ती रहीं। तमाम बंदिशों के बावजूद मीरा अपने को स्थापित करने में सफल रहीं। मीरा का यह संघर्षपूर्ण जीवन हमारे लिए आज भी प्रासंगिक है।
