Read the following information carefully and answer the given questions.

Procrastination is a challenge we have all faced at one point or another. For as long as humans have been around, we have been struggling with delaying, avoiding, and procrastinating on issues that matter to us. During our more productive moments, we feel satisfied and accomplished. Human beings have been procrastinating for centuries. The problem is so timeless, that ancient Greek philosophers like Socrates and Aristotle developed a word to describe this type of behaviour: Akrasia. Akrasia is the state of acting against your better judgment. It is when you do one thing even though you know you should do something else. The most prominent explanation in present literature draws upon "Intemporal discounting, task averseness and certain personality traits such as indecisiveness and distractibility" as the common causes of procrastination. According to psychology, the pleasure principle may be responsible for procrastination; one may prefer to avoid negative emotions by delaying stressful tasks. Some psychologists cite such behaviour as a mechanism for coping with the anxiety associated with starting or completing any task or decision. Behavioural psychology research has revealed a phenomenon called "time inconsistency". Time inconsistency refers to the tendency of the human brain to value immediate rewards more highly than future rewards. There are a variety of strategies we can employ to stop procrastinating. If you can find a way to make the benefits of long-term choices more immediate, then it becomes easier to avoid procrastination. One of the best ways to bring future rewards into the present moment is with a strategy known as temptation bundling. Temptation bundling is a concept that came out of behavioural economics research performed by Katy Milkman at The University of Pennsylvania. Simply put, the strategy suggests that you bundle a behaviour that is good for you in the long-run with a behaviour that feels good in the short-run.
