Read the following passage and answer the questions below.

Indeed, we cannot communicate efficiently if we do not master the essential principles of grammar or syntax. If we imagine language as a big highway, the words are the cars and trucks, but the grammar is the road signs and markings that tell people driving on it where to go and how to drive. Without road signs, a big highway would quickly descend into total confusion. Without any grammar, we could manage to produce some sort of elementary communication, such as "Me Tarzan, you Jane", but we would be unable to form any more complex ideas into words. It follows therefore that mastering the essential grammatical rules is a vital skill that needs to be acquired by all learners of any language - whether it be their native language or a foreign language.

That being said, it is generally possible to communicate orally, notably through dialogue, with just a minimal mastery of grammar, since oral communication and in particular dialogue are bilateral processes, in which the receiver - the person being spoken to - can request clarification and repetition from the speaker until the meaning of a message is clear. However, even when communicating orally, and even if a poor mastery of the rules will not normally prevent two people from communicating relatively effectively, we need some notions of grammar, as these ensure that speaker and listeners use the same code;

With written language, grammar is essential; written communication is deferred or indirect communication, and is unidirectional, so there is no possibility for the receiver to demand verification - at least not under normal circumstances. Written communication and any other form of indirect communication thus depend on correct use of grammar or syntax, as well as of vocabulary and spelling, in order to ensure that messages are immediately comprehensible to the reader, and not meaningless or ambiguous.
